

# Armor | Anywhere

MANAGED SECURITY FOR AMAZON WEB SERVICES

## Regain Control & Visibility

Organizations depend on a multitude of environments tasked with supporting specific business objectives.

For many, this strategy includes a blend of infrastructure types — virtual clouds, public clouds or customer-owned IT environments — that require different management, security and support levels.

Armor Anywhere allows you to instantly defend your AWS operating systems with the top Armor security technology and controls.

## Reduce Costs, Outsource Security

Dangerous security threats can be mitigated or even eliminated with the appropriate tools, processes, threat intelligence and analysis. But the selection, purchase, integration and management of the required security technology and services can be expensive to deploy and difficult to manage.

Save valuable time and outsource these challenges by allowing Armor to defend and support your applications and data workloads that are stored in the AWS Cloud.

## Armor Management Portal (AMP)

Armor's management portal is your window into your secure Armor Anywhere environment. Modern and highly intuitive, the portal is mobile-friendly and delivers real-time data into your security posture.

**Take control.**

Operating in the AWS Cloud has many cost, time and flexibility advantages. Find your balance by combining the benefits of AWS with a secure VM and a proactive security team — only available with Armor Anywhere for AWS.

MANAGED SECURITY

VISIBILITY & CONTROL

ANY CLOUD,  
PUBLIC OR PRIVATE

EASY & COST-EFFECTIVE

# Managed Security for Amazon Web Services

## Security from the Core

Integrate Armor managed security and support to the AWS Cloud. It's the smart approach to building consistent security standards and practices across data workloads, infrastructures and applications. Armor Anywhere for AWS enables your organization to balance security, cost-effectiveness and cloud accessibility.

### CORE

Armor's managed security-as-a-service delivers OS-level protection for private data to various environments. Combine the benefits of the cloud with Armor's proactive security team.

CORE security features:

24-7 SECURITY

MALWARE PROTECTION

PATCH MONITORING

FILE INTEGRITY MONITORING

LOG & EVENT MANAGEMENT

EXTERNAL VULNERABILITY SCANS

## DESIGNED FOR DEVOPS

For organizations that rely on tight integration and collaboration between development and operations (DevOps), Armor Anywhere streamlines security and integrates into environments without disruption.

AUTOMATED INSTALL

SUPPORTS AUTO-SCALING

LOW ENVIRONMENT IMPACT

WIDE OS SUPPORT

### Clear Compliance

Using AWS to host sensitive data? With Armor Anywhere, you can protect that data with security controls that are designed to help meet PCI and HIPAA compliance requirements. It's the audit-friendly approach for defending ePHI, PII and payment data.
